

OUR FIELD TRIP TO

On Sunday, 28th February, 2010, we were all excited- it was the day of our field trip. We were in the bus by about 9:00 a.m. and when we hit the road, all of us were happily singing songs. On route, we saw Jet Aviation, the company, where one of my friend's Mum works. Finally, we reached the Creek Park, we all got off the buses and lined up outside. We were then led into a classroom and asked to eat our food and leave our bags there. When we were finished, a lady took us all around.

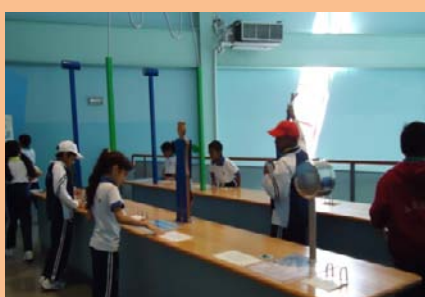

First we went to see the Science Exhibits, where we saw all about the human body. Then we went to the Computer Section and you would not believe - there was a huge computer and lots of keys to type. It was great fun here.

Well, sadly our last stop was the *Space Place-the Planetarium*. We were shocked by the 3D screen, with no glasses at all. It was truly an amazing sight therein.

We then headed right back to where our bags were kept. We waited there for quite sometime, till the other group finished inside. Once we were all assembled, we walked right back into the bus and were on our way back to school.

I had a really awesome time on this field trip and I sure will never forget it!!!

First we visited 'Discovery Science'. There we saw how our joints worked, how long we could jump, how to clean seeds, etc. We went to a place where we learnt how people communicated in the past and present. Then we went to a place called 'Lets play' there we learnt to recycle cans, dress up like a teacher, ride a bike or car and many more things. It was fun! Awesome! Super! Whenever you go out with friends its always fun.

The part I loved the most was when we went to watch the 3D movie which was of 35 minutes. I have been there many a times but every time I went there I never got to visit the entire gallery. The total number of galleries we visited was 6. All of them were wonderful and this is the best field trip I have ever been to.

The first gallery which we went to told us about our body. There was a huge mouth which we could walk into and sit in. There were a lot of small computers that told us how to take care of our body. There were many things that fascinated me! I had so much fun in Children's City and hope I can go there again.

We saw many models and sculptures. But I loved one model the most and that was a dinosaur destroying a place. We also saw a big model of a carriage of gold. We saw the most interesting movie in such a place that the place and the movie made us imagine that we were in space. The place was the Planetarium! And the movie – Oasis in Space. We did many experiments too like how much force is needed to drive an aeroplane. It was a fun trip to Children's City.
